DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this Examiner's Amendment was given in a telephone interview with Chih-Hsin Teng (Registration number 63168) on Nov 18, 2008.

The application has been amended as follows:

Claim 8 line 2 "communication I/Fs" has been changed to –communication interfaces (I/Fs)--.

Claim 8 line 24 "routing information" has been changed to –memory further stores routing information--.

Claim 18 line 1 "A business method" has been changed to -A method for--.

Claim 18 line 25 "routing information" has been changed to –memory further stores routing information--.

Allowable Subject Matter

2. Claims 8-18 and 20-27 are allowed.

Reason for Allowance

3. The following is an examiner's statement of reasons for allowance:

The prior art of record does not teach the following:

In regards to claim 8 the prior art does not teach a memory stores a corresponding relationships each defining among a physical interface identifier for identifying a physical interface, a logical interface identifier for identifying a logical interface, a kind of protocol of a received packet, a first virtual router identifier for identifying a first virtual router, a first packet processing action to be executed on the received packet by the first virtual router, a second virtual router identifier for identifying the second virtual router designated to exclusively execute a second packet processing action which is different from first packet processing action; wherein each of the plurality of virtual routers functions as the first virtual router to distribute a received packet to the second virtual router which exclusively executes the second packet processing action on the received packet, and the second virtual router exclusively

executes the second packet processing action on the received packet based on one of

the corresponding relationships including one physical interface identifier for identifying

the physical interface having received the packet, one logical interface identifier for

identifying the logical interface having received the packet, one kind of protocol

category of the received packet, and then performs a routing processing with reference

to the routing information and outputs the packet.

Page 3

In regards to claim 18 the prior art does not teach a memory which stores a corresponding relationships each defining among a physical interface identifier for identifying a physical interface, a logical interface identifier for identifying a logical interface, a kind of protocol of a received packet, a first virtual router identifier for identifying a first virtual router, a first packet processing action to be executed on the

received packet by the first virtual router, a second virtual router identifier for identifying the second virtual router designated to exclusively execute a second packet processing action which is different from first packet processing action, distributing by each of the plurality of Virtual routers functioning as the first virtual router a received packet to the second virtual router which exclusively executes the second packet processing action on the received packet; and exclusively executing by the second virtual router the second packet processing action on the received packet based on one of the corresponding relationships including one physical interface identifier for identifying the physical interface having received the packet, one logical interface identifier for identifying the logical interface having received the packet, one kind of protocol category of the received packet, and then performing a routing processing with reference to the routing information and outputs the packet.

In regards to claim 21 the prior art does not teach a memory which stores corresponding relationships each defining among a physical interface identifier for identifying a physical interface, a logical interface identifier for identifying a logical interface, a kind of protocol of a received packet, a first virtual router identifier for identifying a first virtual router, a first packet processing action to be executed on the received packet by the first virtual router, a second virtual router identifier for identifying the second virtual router designated to exclusively execute a second packet processing action which is different from first packet processing action, and also stores routing information for routing a packet, wherein each of the plurality of virtual routers functions

as the first virtual router to distribute a received packet to the second virtual router which exclusively executes the second packet processing action on the received packet, and the second virtual router exclusively executes the second packet processing action on the received packet based on one of the corresponding relationships including one physical interface identifier for identifying the physical interface having received the packet, one logical interface identifier for identifying the logical interface having received the packet, one kind of protocol category of the received packet, and then performs a routing processing with reference to the routing information and outputs the packet.

The prior art alone or in combination fails to jointly suggest or teach the claimed combination of features as taught by the instant application. Therefore claims 8-18 and 20-27 are to be deemed allowable over prior art.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to SALMAN AHMED whose telephone number is (571)272-8307. The examiner can normally be reached on 9:00 am - 5:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Edan Orgad can be reached on (571) 272-7884. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
